DETAILED ACTION

Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114.

Applicant's submission filed on 2/08/2007 has been entered.

Claims 1-15 are currently pending.

Claims 5-6 and 9-15 are withdrawn from consideration as being drawn to non-elected inventions.

Claims 1-4 and 7-8 are currently under consideration.

Claim Rejections - 35 USC § 101

35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claims 7-8, as written, do not sufficiently distinguish over peptides as they exist naturally because the claims do not particularly point out any non-naturally occurring differences between the claimed products and the naturally occurring products. In the absence of the hand of man, the naturally occurring products are considered non-statutory subject matter. *See Diamond v. Chakrabarty*, 447 U.S. 303, 206 USPQ 193 (1980). The claims should be amended to indicate the hand of the inventor, e.g., by insertion of "Isolated" or "Purified" as taught in claim 1. See MPEP 2105.

All other rejections and/or objections are withdrawn in view of applicant's amendments and arguments there to.

Conclusion

Claims 1-4 appear to be free of the prior art, and therefore, are in condition for allowance. In the instant case, Wang et al. (US 6,426,072), considered the closest prior art to claim 2, teach a polypeptide which has 99.5% identity to the instantly claimed amino acid sequence of SEQ IDNO:

Art Unit: 1642

48. Adolf et al. (DE19924199, 2000), considered the closest prior art to claim 4, teach a polypeptide having an amino acid sequence which comprises the instantly claimed amino acid sequence of SEQ ID NO: 49 (page 18, SEQ ID NO: 2 of Adolf et al.). However, the polypeptide disclosed by Adolf et al. consists of 742 amino acid residues; and therefore, does not meet the claimed limitation of having a molecular weight of about 35 kDa. Claims 7-8 appear to be free of the prior art. Reed et al. (WO 99/47674, 1999), considered to be the closest prior art to the peptide consisting of SEQ ID NO: 50, teach a polypeptide which comprises the instantly claimed amino acid sequence of SEQ ID NO: 50. Wang et al. (WO 00/61612, 2000), considered the closest prior art to the peptide consisting of SEQ ID NO: 51 or SEQ ID NO: 52, teach a polypeptide which comprises the instantly claimed amino acid sequence of SEQ ID NO: 51. Thus, neither Reed et al. or Wang et al. teach a peptide consisting of SEQ ID NO: 50, 51 or 52.
